FLEXIBILITY IS OUR BUSINESS

Langen & Sondermann
Springs for Rail Vehicles

FLEXIBILITY IS OUR BUSINESS

We know best the demand on our machines and how hard it is to meet our own high quality stipulations. That is why we designed and built the most vital machines and facilities ourselves for our own peace of mind to have the most modern and state-of-the-art machinery for production and quality control. This enables us to produce daily superior products of the highest

quality standard. This is essential, for our springs are components relevant to safety. They must over a long time span, often in a rough environment, maintain a flawless vibration- and energy-storage behaviour.

The right quality of materials, construction and dimensions are just as vital for a long-lasting and flawless functioning as the precision of

production. Using the CNC-system guarantees a high repetitive precision and flexibility which affords even with small batches an economical production.

Siemens Transportation Systems

We have manufactured springs for railcars since our company was founded in 1922. Today we have the approval of practically all European railway companies and deliver our products to many railway companies and manufacturers of railcars worldwide.

We were awarded the DIN ISO 9001 certification back in 1994 and are Q1 suppliers of DB AG since 1995. Today we are leading manufacturers of springs for railcars in Europe.

But we are not going to rest on our laurels, because standing still means going backwards. Continuous development, quality awareness and total customer orientation are the most important ingredients of our company's philosophy. We aim to be still marketing leaders tomorrow!

Ongoing production controls right up to the ultimate check on completion by special test machines is a matter of course for us. Our products are consistently tested on our own hydro-pulsing machines to prove their high quality in long-term vibration trials.

It goes without saying that this is paramount for any newly developed product! But the best machines are only as good as the operators who work on them. Our team of highly skilled and experienced specialists guarantee production of absolute quality and reliability.
